

Puki's Airline

Fly on Yourself

General

Your challenge is to create a professional back-office application through which travel agents book a flight to a passenger.

Your Challenge

1. Make Passenger CRUD
 - a. Don't worry about uploading photos for now, just create 5-10 ready ones with filenames by passengers ids
2. Make Plane CRUD pages:
 - a. Plane: id, model, sitsCount
3. Make Flight CRUD pages:
 - a. Flight: id, src, dest, date, plane
4. Build an interface to book a ticket (see detailed requirements below)

Bonus

1. In the Passenger details section, show all his flights
2. if the passenger has a birthday today, show a gift icon
3. In the Plane details see its Flights schedule (past and future)

Important Guidelines

1. This is a serious website, make it look like it. Look around at the way other airlines websites tend to look.
2. Again: those are just wireframes, not a design, make it look professional!
